

SAURABH GUJAR

College Park, MD | (669) 869-6901 | [Email](#) | [LinkedIn](#) | [GitHub](#)

Summary: Versatile MS Applied Machine Learning candidate (UMD '27) with 5+ years of experience in data management and enterprise storage. Proven track record of leveraging feature engineering and predictive modeling to drive large-scale data analysis. Adept at end-to-end model deployment and optimizing production AI systems for maximum reliability. Seeking Summer 2026 opportunities in AI/ML Engineering or Data Science.

EDUCATION

University of Maryland, College Park	Masters in Applied Machine Learning	Expected - May 2027
University of Pune, India	Bachelor of Computer Engineering	May 2020
GPA: 9.67/10 – Ranked 1st in the Department		

SKILLS

- **Languages:** Python, C++, MySQL, Bash, JavaScript/TypeScript
- **AI, ML & Data Science:** TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib, SciPy, NLP, Neural Networks, Deep Learning, Anomaly Detection, Feature Engineering, Data Validation, Data Analytics
- **Generative AI:** LangChain, RAG, Hugging Face, LlamaIndex, Multi-Agent Systems, Prompt Engineering
- **Tools & MLOps:** AWS, Docker, Jenkins, Ansible, Git, Jira, Confluence, Bitbucket, Model Deployment, Data Pipelines
- **Systems & Concepts:** Django, Virtualization, Filesystems, Software Defined Storage, Data Structures, OOP, Linux (RHEL), Windows

TECHNICAL EXPERIENCE

Cohesity Member of Technical Staff QA 3	Dec 2024 – Jul 2025 Pune, India
• Designed and integrated Auto-Triage ML-driven defect pipelines, automating 90% of test triggers and reducing manual triage by 45%, saving 20+ engineer hours per release cycle. • Optimized VM-to-test runtime by 30% and achieved 95%+ pass rate by developing Python-based regression and sanity pipelines for distributed filesystems (VxFS + SpanFS), mentoring 2 junior team members. • Architected robust data validation pipelines ensuring system reliability in enterprise-scale environments with a team of 18. • Performed EDA on kernel crash dumps and large-scale log data, reducing critical bug resolution time by 25%. • Contributed to feature design, test plan, and code reviews for each release, improving process efficiency and code quality.	

Veritas Technologies LLC Software QA Engineer	Jul 2020 – Dec 2024 Pune, India
• Captured 32% more defects during product upgrades and 60% more during rollbacks via fault-injection pipelines simulating anomalies. • Boosted code coverage from 47% → 70% by automating validation workflows in Python, enabling scalable ML-relevant pipelines. • Directed ML-relevant testing for anomaly detection and malware scanning across large-scale storage environments. • Elevated automation standards using Jenkins, Docker, Ansible, & Linux to streamline ML workflow automation, CI/CD, and data pipelines.	

PROJECTS

Agentic LLM Workflow for Application Lifecycle Management <i>Personal Project</i>	Nov 2025
• Engineered a Generative AI-powered multi-agent orchestration pipeline with a Judge-Evaluator loop to autonomously scrape job descriptions, generate tailored LaTeX content, and validate output against ATS scoring metrics, effectively mitigating hallucinations. • Architected a production-grade Human-in-the-Loop system for transforming unstructured web data into structured PDF documents, enabling asynchronous batch processing of 50+ applications and demonstrating robust data annotation and validation.	
Auto Triage: Automated Defect Classification & Reporting with ML <i>Team Member (Cohesity)</i>	Aug 2021
• Built a supervised ML framework for automated defect classification, achieving 82% accuracy across Robot and CLI test outputs. • Designed datasets via scraping and preprocessing Robot test results with BeautifulSoup; applied model retraining and image processing for visual defect analysis across releases.	
MRAC: Movie Rating & Critic System	Aug 2018
• Predicted audience reception with 88% accuracy using genre classification and sentiment analysis. • Enhanced recommendations by integrating NLP-based feature extraction and visualizations.	

HONORS & ACHIEVEMENTS

- **Veritas Appreciation Award** for high-impact contributions demonstrating integrity and accountability.
- **Copyright granted** for SPAS: Secure Password Authentication System.
- **Publication:** “Comprehensive Study on Secured Password Authentication with Encrypted Negative Password and Auth-Store.”
